

**7th ISC-FICCI Sanitation Awards Ceremony and
India Sanitation Conclave
November 20-21, 2023**

Theme: "Impact of WASH on Climate Change – India's
Agenda"

Venue: FICCI Federation House, New Delhi

Tentative agenda	
Day 1- 20 th November 2023 (Monday)	
10:30 am – 11:00 am	Tea
11:00 am – 12:30 pm	Inaugural sessions and ISC-FICCI Sanitation awards felicitation ceremony
11:00 am – 11:05 am	Opening remarks: Ms. Natasha Patel , CEO, India Sanitation Coalition
11:05 am – 11: 20 am	Keynote Speech "Climate change presents a major threat to water and sanitation services both, in rural and urban communities, a national perspective" by Ms. Naina Lal Kidwai, Chair, India Sanitation Coalition
11:20 am – 11:30 am	ISC-FICCI Sanitation Awards 2023: Opening Remarks by Dr R. A. Mashelkar, Former Director General, Council of Scientific & Industrial Research and Chair, Awards Jury
11:30 am – 12:30 pm	Felicitation of ISC-FICCI Sanitation Award winners by Dr R. A. Mashelkar, Former Director General, Council of Scientific & Industrial Research and Shri Manoj Joshi, Secretary, Ministry of Housing & Urban Affairs
	Announcement of winners by: Ms Natasha Patel, CEO, India Sanitation Coalition at FICCI
12:30 pm – 01:05 pm	Unveiling the Compendium "Cities in Crisis: Best Practices on curbing plastic waste across Urban India" by Ms. Roopa Mishra, Joint Secretary, Ministry of Housing & Urban Affairs
12:30 pm - 12:40 pm	Address by Mr Subhrakant Panda, President – FICCI
	Topic: Plastic Waste Management in India: opportunities, effectiveness, and sustainability of plastic waste management interventions
12:40 pm - 12: 50 pm	Introduction of the compendium by Ms. Natasha Patel, CEO, India Sanitation Coalition
12:50 pm - 01:00 pm	Address by Shri Manoj Joshi, Secretary, Ministry of Housing & Urban Affairs
	Topic: Can Extended Producer's Responsibility (EPR) be the answer for Urban India's plastic crisis?
01:00 pm - 01:05 pm	Unveiling of the compendium by Ms. Roopa Mishra, Joint Secretary, Ministry of Housing & Urban Affairs, and Mr. Subhrakant Panda, President - FICCI
01:05 pm - 01:15 pm	Unveiling the Accolade by Mr Shailesh K Pathak, Secretary General – FICCI and Ms. Naina Lal Kidwai, Chair, India Sanitation Coalition

01:05 pm - 01:10 pm	Address by Mr. Shailesh K Pathak, Secretary General-FICCI
01:10 pm - 01:15 pm	Release of the “Accolades: A Photo Journey of the ISC-FICCI Sanitation Award Winners 2023” by Mr Shailesh K Pathak, Secretary General – FICCI and Ms. Naina Lal Kidwai, Chair, India Sanitation Coalition
01:15 pm - 01:20 pm	Address by Shri Hardeep Singh Puri, Union Cabinet Minister, Ministry of Housing and Urban Affairs
	Topic: “Irrepressible WASH programming for urban India to ensure community resilience to climate-related risks”
01:20 pm - 01:30 pm	Presidential Address by the Chief Guest: Shri Gajendra Singh Shekhawat, Union Cabinet Minister, Ministry of Jal Shakti
	Topic: How can the rural and urban ministries work together to achieve the objectives of SBM 2.0?
01:30 pm – 02:30 pm	Lunch
2:30 pm – 6:00 pm*	Panel discussions
2:30 pm – 3:30 pm (60 mins)	Topic: Reclaiming the squandered fortune: legacy waste management and dumpsite remediation, a tool for reducing the harmful impact of landfills on health & environment Theme: According to the government data, there are an estimated 2237 dumpsites, most of which have a legacy waste of more than or equal to 1,000 tonnes. The estimated quantity of legacy waste on these dumpsites is 2,449 lakh tonnes and the estimated area occupied by this waste is a massive 18,995.93 acres. Of this only 29% (708 lakh tonnes) of waste has been remediated and only 16% (2,950.37 acres) of land has been reclaimed so far. In Uttar Pradesh alone 3,873.10 acres of land is still to be reclaimed. Initially positioned outside urban areas, these landfill sites have become increasingly close to cities due to urban expansion. Notably, open dumps in Delhi, such as Ghazipur (69 meters high), Okhla (55 meters high), and Bhalswa (56 meters high), have far exceeded the permissible height limit of 20 meters and have surpassed their waste-holding capacity for which they were originally established. This grim scenario is when in 2021, operational guidelines of Swachh Bharat Mission (SBM) 2.0 had made it mandatory for cities with a population of < 10 Lakhs to clear legacy waste sites by 31st March 2023 and cities with a population of > 10 Lakhs by 31st March 2024. A task that we all know is herculean and far from being completed. In 2020, CPHEEO reported that as much as 1,250 hectare of precious land is lost every year in India to dispose of municipal solid waste. Legacy waste encompasses partially or fully decomposed biodegradable waste, plastics, textiles, metals, glass, and other materials. The composition and properties of legacy waste differ significantly from fresh municipal solid waste, thereby impacting the selection of treatment technologies and determining the potential uses of recovered materials. Previously, the conventional practice involved the disposal of non-segregated waste in unscientific landfills. However, these unlined and unscientific dumpsites have significant negative consequences. They generate toxic leachate, which forms puddles in the surrounding areas and seeps into the ground, causing contamination of both surface water and groundwater resources. Additionally, these dumpsites release greenhouse gases, including methane, contributing to the problem of climate change. Furthermore, they are susceptible to surface fires, which rapidly emit hazardous pollutants into the atmosphere. As a result, unscientific dumpsites have adverse implications for both environmental and human health.

	Infamous dump sites like Deonar in Mumbai; Bawana, Bhalswa, Ghazipur, Narela and Okhla in Delhi; Bingipura and Laksmipura in Bengaluru; and Dhapa and Garden Reach in Kolkata are a few examples of unscientific landfills in India. In the absence of exposure to air, the high-rises of rotting mixed waste on these sites generate methane (a greenhouse gas) and other landfill gases, which contribute to global warming. Many national and international waste experts have spoken in support of the concept of “landfill mining” (LFM) as a tool for resource recovery and for reducing environmental hazards associated with landfills and dumpsites across the globe. In India, LFM can be seen as the method to solve urban environmental concerns by clearing landfill space for future waste management while reclaiming dumped resources. However, for LFM to be successful, local government participation, subsidy and incentives, strategic planning, and public participation are required. As part of the Swachh Bharat Mission, India is committed to achieving the goal of 'Lakshya Zero Dumpsites' within the mission's timeframe. Under the leadership of the Secretary, Ministry of Housing and Urban Affair (MoHUA), the proposal for complete remediation has been approved for 280 cities. Specifically, MoHUA has sanctioned a proposal for legacy waste dumpsite remediation in Telangana, targeting the remediation of 3.25 million metric tonnes of legacy waste and reclaiming over 842 acres of land for optimal utilization across the state. Through this panel discussion we will try and find answers to many crucial questions pertaining to legacy waste management, including the current and future plans for legacy waste management, what needs to be done further to reclaim the acres of lost land and what are the possible end-to-end solutions for this. Moderator: Dr. Suneel Pandey, Director, Environment & Waste Management Division, TERI Speakers: 1. Arun Murugesh, Vice President Sales Marketing, Saahas Zero Waste 2. Prabhakar Lingareddy, Executive Vice President and Head - Social Investments, ITC Ltd 3. Swapan Mehra, Founder, Iora Ecological Solutions 4. Nagesh Prabhu Chinivarth, Co-Founder, Zigma Global Environ Solutions Pvt. Ltd 5. Deepak Arora, President- Public Affairs and Head - CSR, Nayara Energy
3:30 pm - 4:30 pm (60 mins)	(HYBRID SESSION) Climate Resilient Cities with a focus on Coastal states Theme: Climate change represents the most significant challenge of the twenty-first century and poses severe risks to water and sanitation services. The risks are higher and more intense in coastal areas, given the higher vulnerability index due to their physical proximity to coastlines and increasing cyclonic activities. The Indian coastline of the mainland is 7,516.6 km long, home to over 260 million people, or one third of India's population living in low lying areas within 50 km of the seacoast, constantly exposed to climate variabilities and extreme weather events. Nine major states lie on the coast- Gujarat, Maharashtra, Goa, Karnataka, Kerala, Tamil Nadu, Odisha, Andhra Pradesh and West Bengal. Coastal states, with a special focus on the west coast, are also the highest urbanised states in India. These regions are of enormous socio-economic significance to India since together they account for nearly 60 per cent of India's FDI inflow and are hub to critical economic infrastructure of the country. As a result, the country is extremely vulnerable to climatic fluctuations and extreme weather events. GoI has launched an ambitious program called the Sagarmala Programme (transl. Garland of the sea) that envisions to enhance the performance of the country's logistics sector. The gains and development envisaged through this scheme can be severely compromised if the climate change impact on these coastlines is not considered. The WASH infrastructure to be climate resilient is of utmost importance since WASH infrastructure and services are central to growth, sustenance and normal functioning of any city. ISC has put together a proposal and team to conduct a Primary Research in one state along with a demonstration of proof of concept within one select small city The high power committee will help the audience understand the current situation of the climate impact on these areas, their perspectives and their expectations from the project.

	Moderator: Ms Aditi Pandey, Head - Partnerships & Communication, CDD India Speakers: 1. Mr Manoj Joshi- Secretary, MoHUA 2. Mr Parameswaran Iyer, Executive Director, World Bank -hybrid 3. Ms Naina Kidwai, Chair ISC – Chair, ISC 4. Mr Ravi Mariwala, Founder, Smaart Water 5. Mr Romit Sen, Senior VP, Corporate Sustainability, HSBC India
4:30 pm- 4:45 pm	Tea break
4:45 pm - 5:45 pm* (60 mins)	Challenges of Urban Sanitation – Theme - Urban sanitation in India faces many challenges. Rapid urbanization and the need for a policy for urbanizing areas such as the census towns and Nagar Panchayats are some of the challenges. Inadequate maintenance, ineffective management of fecal waste, rising groundwater contamination, and over-dependence on centralized wastewater management are other challenges. Nearly 60 million people in urban areas lack access to improved sanitation arrangements, and more than two-thirds of wastewater is let out untreated into the environment, polluting land and water bodies. The Swachh Bharat Mission (SBM) was launched by the Indian government in October 2014 to address the issue of sanitation and waste management. The Ministry of Environment, Forest and Climate Change (MoEFCC) came up with Plastic Waste Management Rules (PWMR), 2016 in line with the objectives of this mission. PWMR aims to regulate the manufacture, usage, collection, segregation, transportation, processing, and disposal of plastic waste. NITI Aayog and UNDP India have jointly developed a ‘Handbook on Sustainable Urban Plastic Waste Management’ which provides practical, replicable, and scalable solutions to manage plastic waste. The handbook is intended for urban local bodies (ULB’s) and is a repository of 18 case studies/best practices from India. The Ministry of Urban Development (MoUD) has developed guidance notes titled ‘A Guide to Decisionmaking—Sanitation Technology Options for Urban India’ which are extremely timely, providing an overview of various sanitation technologies available for urban areas in India. What do we see as the challenges and dependencies in addressing and scaling up the solutions to meet the challenges of urban sanitation? Moderator : Ms Natasha Patel, CEO, India Sanitation Coalition Panel: Ms. Madhu Rani Teotia, Director DAY-NULM/ Swachh Bharat Mission-Urban/ Capacity Building, Ministry of Housing and Urban Affairs Mr. Shraman Jha, CEO, Hindustan Unilever Foundation Mr. Mahesh Girdhar, MD & CEO, EverEnviro Resource Management Pvt Ltd. Mr. Ravi Mariwala, Founder, Smart Water

Tentative agenda

**Day 2- 21 November 2023,
Tuesday**

11:00 am – 11:10 am

Recap of Day 1 and welcome by Natasha Patel (15 mins)

**11:10 am – 12:45 pm (95 mins)
(Session 1)**

Lighthouse Initiative – DDWS

The Lighthouse Initiative was commissioned by the Department of Drinking Water and Sanitation, Ministry of Jal Shakti as an intervention under Swachh Bharat Mission Grameen under the PPP model. It is based on the principle of inclusive sanitation and leaving no one behind. The Initiative aims to effectively implement Solid and Liquid Waste Management (SLWM) structures in the villages of the 75 GPs taken up in Phase 1, employing a participatory and consultative approach through mobilization of the village communities, Corporates, District & Block Administration and Village or Gram Panchayat officers, who would work side by side to achieve the Development plans drawn for the villages in question.

The idea behind the initiative was to add to the SBMG and envisions the establishment and sustenance of selected villages as Open Defecation Free. The villages qualifying as model Light Houses would be used as positive examples across the country encouraging other villages to follow suit. Based on the DDWS definition of Aspiring, Rising, and Model villages, a WASH committee for each GP will finalize a development plan for each village in that GP. The corporates pledged their CSR funds for awareness and IEC and BCC, and the government funds towards infrastructure build.

Theme: In a bid to accelerate the efforts to achieve universal sanitation coverage and to put the focus on sanitation, the Prime Minister of India launched the Swachh Bharat Mission (SWM) on 2nd October 2014. Under the mission, all villages, Gram Panchayats, Districts, States and Union Territories in India declared themselves “open-defecation free” (ODF) by 2 October 2019, to mark the 150th birth anniversary of Mahatma Gandhi, by constructing over 100 million toilets in rural India. The Lighthouse initiative curated was one further step in this direction, ensuring training and community mobilization for achieve of sustained sanitation. This sessions theme will focus on the achievements of the PPP programme, Light House Initiative with inputs from DDWS

Keynote speakers: Ms. Vini Mahajan, Secretary, DDWS, Ministry of Jal Shakti,

Presenters Corporate & State Mission Directors:

1. Shri Vishal Gupta, State Mission Director, Gujarat
2. Shri Rahul Kumar, State Mission Director, Bihar
3. Shri Raj Kumar, State Mission Director, Uttar Pradesh
4. Dr. Dipam Patowary, State Solid Liquid Waste Management Specialist, SBM-G, Public Health and Engineering Department, Assam / Monalisa Das, State Coordinator, SBM-G
5. Mr Chandrakant Kumbhani, COO - Community Development, Ambuja Cement Foundation
6. Mr K Binoy, Regional Manager, ITC Limited
7. Mr Alok Varma, Director, HCL Foundation
8. Mr Manoj Kumar, Tata Trust

12:45 pm -1:30 pm	Lunch
1:35 pm – 3:05 pm (90 mins)	Plastic Circular Cities The proposed project ‘Plastic Circular Cities’ by ISC and its partners aims to tackle the problems caused by plastic waste and is an attempt to find solutions to effective plastic waste management for the 6 cities identified for Maharashtra with 1 million population, which is also aligned to the mandate of the Government. Godrej Consumer Products Ltd (GCPL) and the India Sanitation Coalition at FICCI (ISC) have embarked on an ambitious and critically necessary initiative which aims to demonstrate pilots in each of the 6 (1 million +)cities in the state of Maharashtra across the next 5 years and to provide a sustainable and inclusive waste management solution to these cities with a specific focus on plastic and zero landfill. The 6 cities are Mumbai, Vasai Virar, Nagpur, Nasik, Pune and Aurangabad. Theme: : Plastic waste is one of the most pressing environmental challenges of our times. According to a report by the Central Pollution Control Board (CPCB), India generates about 26,000 tonnes of plastic waste per day, of which only 60% is collected and recycled. The rest ends up in landfills, water bodies, or is burnt, causing severe environmental and health impacts. To address this challenge, India has enacted the Plastic Waste Management Rules, 2022, which aim to promote the reduction, reuse, and recycling of plastic waste, and to phase out single-use plastics. However, the implementation of these rules faces several barriers, such as lack of awareness, infrastructure, technology, markets, and incentives for plastic waste management. To address this issue, it is imperative to study the waste segregation and flow from source to reuse. The right processes to segregate waste at source as well as tracing the upstream straight from the household to MRF and from MRF to reuse need to be studied, analysed, and understood. While the scenario is changing owing to more awareness generated by discussions on the harmfulness of plastic use and global warming in every forum, a lot of it is yet to tickle down to lower levels where segregation at source is of major concern. The ideal situation would be where maximum plastic is recycled and reused. This is not an easy task because awareness regarding segregation is minimal to non-existent. This adds to the already challenging scenario wherein currently most of the plastic is dumped in landfills. Godrej, ISC along with 3 implementing partners would be embarking on one such ambitious initiative, covering the research of the existing SWM plans for 6 of the 1 Million+ cities of Maharashtra and conduct outreach programs for the private sector to partner and collaborate in the development of a demonstrable value chain which could further be scaled up across the country. Where day-to-day waste management is concerned, the expectation is that the ULBs would support the initiative by providing existing data as well as land and necessary permissions to build any infrastructure required such as MRFs etc. Corporates either through CSR or debt funding would engage in the partnership with a view towards building the end-to-end value chain of plastic circularity, reducing plastic waste and to undertake the softer aspects like Behaviour Change Communication (BCC) through Information Education Communication (IEC) materials/activities and ensure as little plastic as possible ends up in landfill while most of it is recycled and reused creating a sound plastic circular economy. The prospect of Public Private Partnership (PPP) would also be explored while attempting to identify the right partners besides the government bodies, who would be willing to take up parts of the implementation process post research and analysis to ensure that waste management process yields the best possible results. This panel will attempt to understand and break down the various parts of the value chain of plastic circularity which includes sustainability of assets built, involvement of MSMEs or SHGs to ensure the O&M of the assets, livelihood aspects of informal waste workers as well as the processes involved in up streaming of plastic waste. Keynote Speaker: Mr. Navnath Wath, SMD Urban, Maharashtra

	Presentations: By implementing partners – 1. Feedback Foundation - Mr Ajay Sinha, CEO 2. Recity - Mr Suraj Nandakumar, CEO 3. Sampurnearth - Mr Debartha Banerjee, Director Research Funders: Ahona Ghosh, General Manager - Sustainability (Good & Green), Godrej Consumer Products Limited. On Panel & Speakers: Concerned ULBs (Mira -Bhayander and Vasai-Virar, Pune, Aurangabad as well as Nagpur and Nashik)
3:05 pm – 4:35 pm (90 mins)	Wash Financing Theme: How to make PPP model successful in wash financing According to the Financing for Sustainable Development Report 2023, the world is at a crossroads with 2023 being the midpoint of the 2030 Agenda for the Sustainable Development Goals and giving countries a final opportunity to reform and strengthen multilateralism through an international financial architecture that can deliver on the ambitious global goals set out in 2015, along with national actions to invest in sustainable transformations. The question before us is – how much is India impacted by the global crisis and in need of multilateral aid and to what extent is its national development agenda being supported by its own internal financial policies. The Addis Ababa Agenda among all its actions has highlighted a couple of financial actions which would need to be fulfilled if India was to meet its SGD goals, highlighting the need for “Shaping the private financial sector through regulatory and other measures to encourage long term financing and aligning it with sustainable development”. So how can India heed this advice? It is evident that the SDG stimulus will only succeed if national policies reignite investment in the SDGs nationally. India has seen a plethora of such investments being made specifically in the WASH sector through SBM as well as other allied schemes as indicated above. Closely linked to the creation and spending on WASH infrastructure is the need to develop the overall WASH ecosystem to sustain it on an ongoing basis and to provide the necessary stimulus sustainable industrial policies linked closely to national sustainable development goals, building a dynamic domestic business sector by encouraging MSMEs both on the supply and buy side, targeted policies to support business and address investment constraints and overall to encourage the private sector to engage commercially at various points from a commercial perspective, making the sector a dynamic and viable growth opportunity commercially while at the same time being able to address the infrastructure requirements of the communities. Moderator: Ms. Naina Lal Kidwai, Chair, India Sanitation Coalition Panel: 1. Shri G Asok Kumar, Director General, Namami Gange (Government) 2. Mr. Akshay Panth, Chief Investment Officer, NEEV Funds, SBICAP Ventures Ltd - TBC 3. Ms. Zarin Daruwala, CEO, Standard Chartered Bank (Banking) - TBC 4. Mr. Manoj Gulati, Director – South Asia, Water.org (Micro Finance) 5. Mr. Prabhakar Lingareddy, Executive Vice President & Head – Social Investments, ITC Limited (Corporate) 6. Ms. Aparna Dua , Director, Asha Impact (Impact Financing)
04:35 pm - 05:00 pm	TEA
